

Find the needles in the haystack in near real time!

FIX Bad...Faster

Just released: "AI Triage" is a complementary service provided by CUES that uses its AI models to interrogate pipeline videos to find the ticking time bombs hidden in your network, without needing to have people perform tedious video review work. Let machines do it!

Our rapid analysis AI TRIAGE SERVICE enables asset managers to:

- Process thousands of videos quickly
- Identify only the pipes in the worst condition
- Act quickly to avert disasters
- Infer Consequence of Failure to protect the public
- Select which pipes need immediate, full coding (PACP, etc.)

BENEFITS

Speed → Process thousands of videos quickly to eliminate review backlogs.

VISUALIZE IMMEDIATE RISK ON YOUR MAPS

Prioritize → Automatically triage worst condition pipes for immediate review.

TAKE NECESSARY ACTION

Overwhelmed by a backlog of video footage? Our AI service helps you efficiently work through large volumes of video to spot high risk pipelines that would otherwise take human reviewers days, weeks, or even months to find. CUES's proprietary AI automatically scans video footage and identifies the worst issues enabling you to prioritize maintenance tasks. **This means you can fix bad faster.**

The GraniteNet Cloud is a turnkey software platform offered by CUES as an annual subscription. Quit buying, patching, upgrading, securing and managing IT servers and storage systems - and join over 100 municipal customers who trust CUES and AWS to provide superior Cloud-based asset management and decision-support services including free AI Triage, AI Coding Services (PACP), Prescriptive Planning Services, and GIS & 3rd Party Work Order system integration. Reach out to your CUES representative for a demonstration or email granitesupport@cuesinc.com today!
