

flexiprobe PT

PORTABLE PUSHROD INSPECTION SYSTEM

The CUES flexiprobe PT is a rugged pushrod inspection system built for municipal crews and contractors who need reliable performance, clear video, and fast reporting in a portable format. Based on CUES's proven C550 controller platform, it delivers consistent results without the complexity of a full TV truck.

Rugged, Field-Ready Design

Heavy-gauge stainless-steel coiler, durable push cables up to 500 ft, and industrial components are built for daily use in tough environments. Designed to travel easily and work reliably on every job.

Proven C550 Control Platform

The 12.1-inch daylight-readable monitor and familiar CUES interface provide clear video, simple operation, and fast startup. Minimal training, dependable performance.

Fast, Built-In Reporting

Onboard reporting software supports quick review, recording, and data transfer via WiFi, USB, or HDMI. Crews produce consistent, defensible reports with less downtime.

Mainline-Capable Pushrod

Heavy-duty pushrod design extends inspection reach into longer laterals and select small-diameter mains, reducing the need for crawlers or full inspection trucks.

CUES's Micro Pan & Tilt Camera

Flexible Camera Options

Interchangeable self-leveling and micro pan-and-tilt cameras adapt the system to different pipe sizes and inspection needs, improving visibility and coverage.

Typical Applications

- ◆ Municipal lateral inspections
- ◆ Small-diameter mainlines
- ◆ Cross-bore investigations
- ◆ Building drains and hard-to-reach pipelines
