

FOR IMMEDIATE RELEASE – March 11, 2024  
Orlando, Florida, USA

## **CUES’ GraniteNet Asset Inspection/Decision Support Software – Recognized as an Esri Cornerstone Partner for 20 Years of Commitment to Esri and ArcGIS Technology**

CUES was recognized as a Cornerstone Partner at the 2024 Esri Partner Conference (EPC) held March 10-11, 2024, in Palm Springs, California. This acknowledgment was presented to CUES for their long-term commitment to Esri and the geographic information system (GIS) community. Cornerstone Partner recognition is given to organizations that have participated in the Esri Partner Network (EPN) for 20 years while demonstrating a consistent focus on helping customers succeed through the adoption of ArcGIS technology.

CUES is the world’s leading manufacturer of pipeline inspection vehicles, robots and software used in the water and sewer industry. In 2004, CUES was the first software vendor in its space to create seamless bidirectional integration between Esri ArcGIS and the CUES’ Granite software platform. Used today by over one thousand municipal utility organizations and contractors, the inclusion of GIS spatial mapping information to asset infrastructure data has transformed the water/wastewater industry from being exclusively focused on individual inspections to adopting network-aware asset management strategies where superior decision-making is being made to more effectively protect the environment and maintain clean water.

## Press Release

---

CUES is pleased to be recognized by Esri as a Cornerstone Partner and is proud to see the industry advances that have been made possible through Esri ArcGIS technology and the GraniteNet software platform.
