

Orchestrate all phases of the construction process:

- Door hanger notifications
- Gas meter assessments
- Pre-Locates, Legacy inspections, Post Locates
- HDD Drilling; Excavation
- Gas Service Connection
- Patching and paving; much more

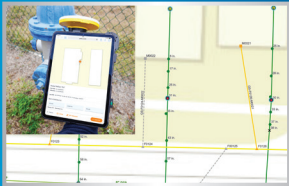

Audit proper procedures and their billings; Reconcile completed work easier for faster invoice-to-payment lifecycles

Track statuses in real time with web dashboards for full views into productivity. Information is available from ANY browser device for field crews to update statuses, transmit video, GPS coordinates, photos, etc.

Inspect gas mains to see live or capped gas connections to assess the need for locating on the parcel.

Capture Centimeter accuracy GPS coordinates easily for any feature required. Archive both GPS & images for potholes required for safety compliance & to reduce open trenching.

Manage HDD drilling by capturing video from CCTV pulled back through the drill path to verify safe, clear bores.

Artificial Intelligence to identify risk, Final QA inspections, archival and storage for indemnification

Drive \$\$ millions in cost savings and productivity gains with gNet Gas!
