GraniteNet Minimum Requirements

CUES endeavors to accept “customer supplied” hardware, but due to constant changes in technology, some hardware may not be suitable to run CUES hardware and software. To ensure that “customer supplied” or self-purchased computer components will operate correctly with CUES hardware and software, CUES provides an evaluation service to determine compatibility. CUES will not charge for this evaluation service, however, customers are responsible for the shipping costs to Orlando, Florida, where the evaluation service is performed.

IMPORTANT! Please ensure that your data is backed-up prior to evaluation.

If the customer-supplied equipment is deemed inadequate, CUES will notify the customer of the deficiencies, and where possible, suggest the relevant parts, updates, and costs necessary to bring the equipment into compliance.

The customer will have the option to update the equipment or return it unchanged. To update the equipment CUES will charge its normal repair labor rate of \$80/per hour, plus the cost of the parts. Estimates will be provided prior to performing any work. Should no modifications be necessary, then the customer will only be responsible for shipping costs
