CUES GXP HELP

===== CUES GXP HELP =====

<CTRL><f> ----- TOGGLE FONT RENDERINGS
 <ALT><CTRL><g> - TO/FROM EQUIPM CONFGRTN
 <F1> --- HELP
 <ESC> --- MAIN MENU

- Press <CTRL><f> to cycle through the font renderings. There are four selections: EBW, HBW, WWB, BBW. The three letters are abbreviations for the background color, outline color and character color used for the text that is overlaid on the video display. E refers to external, meaning that the video is passed through (transparent). W refers to white, B refers to black and H refers to half-tone.
- Press <ALT><CTRL><g> to move to/from the Equipment Configuration screen.
- Press <F1> to display the GXP Help screen.
- Press <ESC> to move to the main menu.

CUES TEST CONTROLLER HELP

===== CUES TEST CONTROLLER HELP =====

The following hot keys are only valid on the Test Controller screen.

<CTRL><ALT><j>- SAVE XPORT JOYSTICK OFFS

- Press <CTRL><ALT><j> to save the values of the gamepad transporter analog sticks. The negatives of these values will then be added to all gamepad transporter analog stick values until the next power cycle of the system. This feature is to be used only if the gamepad's analog sticks are exhibiting 'creep', whereby when at rest, there values are not close enough to zero.

CUES LAMP II HELP

===== CUES LAMP II HELP =====

The following hot keys are only valid when the LAMP II Transporter/Camera are being used.

<ALT><F10> ----- TOGGLE LATERAL DISTANCE
 <ALT><CTRL><v> - TOGGLE VIEW MAIN/LAMP II
 <ALT><d> ----- PRESET LATERAL DISTANCE
 <ALT><z> ----- ZERO LATERAL DISTANCE
 The following only work with the Micro Pan & Tilt
 <SHUTTER>+<DPAD +/>- Raise/Lower floods
 <IRIS>+<DPAD +/>- Raise/Lower spots

WHILE PRESSING THE LIGHTS BUTTON, SIMULTANEOUSLY PRESS THE PLUS OR MINUS BUTTON TO ILLUMINATE THE EXTERNAL LIGHTS BRIGHTER OR DIMMER

PRESS THE LIGHTS AND ON / OFF BUTTONS TO TURN THE INTERNAL LIGHTS ON/OFF

XBOX 360 CONTROLLER FUNCTIONS

The Xbox 360 Controller functions are identical to those of the Logitech Gamepad, aside from the exceptions shown below.

1. 'GUIDE' button: To turn the controller on, press and hold down this button until the ring of LEDs around it begin flashing. The flashing will stop, and the LED in the top-left quadrant will remain lit when the controller is connected to the system.
2. The two 'CONNECT' buttons (one on the wireless receiver and one on the controller): To connect the controller to the system, perform the following steps. NOTE: This is only necessary if the ring of LEDs around the 'GUIDE' button are flashing continuously.
 - a. Make sure that the wireless receiver is plugged into a USB port on the K2/K3 and its LED is lit.
 - b. Press and hold down the 'CONNECT' button on the wireless receiver until its LED begins flashing.
 - c. Press and hold down the 'CONNECT' button on the controller until the ring of LEDs around the 'GUIDE' button start spinning. The controller is connected to the system when the LEDs stop spinning, flash a few times, and the one in the top-left quadrant remains lit.

Several wired and wireless controllers will work with the system and may be available in a critical situation from a local electronics vendor, such as a Radio Shack, Best Buy or Walmart. However, only controllers purchased through CUES will have labels and are guaranteed to have been tested with the system.

The controllers that will work with the K2/K3:

- Wired Logitech Dual-Action
- Wired Logitech RumblePad 2
- Wired Microsoft Xbox 360
- Wireless Logitech RumblePad 2
- Wireless Microsoft Xbox 360
- Logitech Wireless F710
- Logitech Wired F310

Note that this also gives the priority that controllers are given, in the event that more than one is connected to the K2/K3 at a time. (It's common for customers to have both a wireless and a wired controller available. If the batteries go dead on the wireless, the wired controller can still control the transporter, camera and lights). The system will read the highest priority controller if more than one is connected at a time. Every two seconds the system detects if any controller has been connected or disconnected and determines which controller should be read from.
