- ◆ GraniteNet WebSync is a web service for use over the Internet. It is intended to allow the transfer of data and media over the Web back and forth from the office to the field units.
- ◆ Web API (Application Programming Interface) functions as a single-entry point for various clients - desktop, web, mobile and so on.
- ◆ WebSync agent allows a user (or Web API service on office side) to delegate routine or long operations while continuing to do other work.
- ◆ Task-oriented approach allows planning assignments and provides an easier way to manage background work.
- ◆ Secure transmission via https and custom GraniteNet WebSync agents.

HOW IT WORKS:

- ◆ Completed inspections are automatically sent to the office
- ◆ Data encrypted and secure
- ◆ Office can send out planned task orders
- ◆ No portable drives needed
- ◆ Flexible settings for transmitting data and/or media based on connectivity

- TRULY SYNCHRONIZE** ◆ No need to wait until the end of the day. Get precise, up-to-the-hour statuses from the field without human intervention. WebSync agent allows a user (or Web API service on office side) to delegate routine or long operations while continuing to do other work.
- SIMPLE TO USE** ◆ Simply finish your inspection, activate “Sync” and the transfer will proceed in the background while you start a new inspection or pack up to move to the next location.
- NEVER LOSE DATA** ◆ Even with connectivity interruptions, WebSync resumes from where it left off while automatically logging successful receipt. Information and media remain on the computer until successfully transferred.
